

SWISS TELECOM CARRIER

COMPANY PROFILE

SWISS TELECOM CARRIER

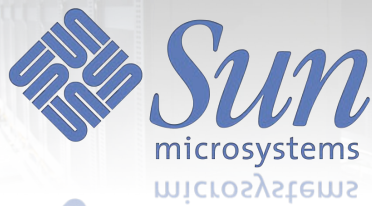

Swiss Telecom Carrier allows worldwide telecommunications companies to obtain total control of their domestic and international wholesale traffic business to improve their business management.

Swiss Telecom Carrier provides unique tools for: inter-carrier agreement management, interconnect billing, **quality** & capacity traffic management, least cost routing, dial code management, reconciliation & dispute management, revenue assurance, carrier access billing, customer risk analysis and many other services.

Swiss Telecom Carrier uses only top of the class equipment from world leading manufacturers.

Swiss Telecom Carrier has a strong commitment to quality, which is continually demonstrated through its people, processes and tools.

Swiss Telecom Carrier experienced personnel continually seek new ways to improve its products and solutions.

Swiss Telecom Carrier tools enable engineers to troubleshoot issues and communicate the resolution effectively to customers.

Swiss Telecom Carrier also has in place solid processes that focus on clear roles, responsibilities and procedures that manage customer inquiries.

Overall, the global services organization is designed to meet customer requirements, providing technical expertise in signaling and switching environments.

- International telephony carriers interconnections.
- Highest quality voice and fax networks.
- Carrier-class billing and switching infrastructures.
- Next generation networks (NGN) solutions.
- Triple-play platforms for service providers.
- WiMAX and WiFi networks.
